

Helmold Sharpening Service

Why jeopardize quality and productivity? Dull cutting, notching and mitering knives produce poor quality dies and damage your equipment. Maintain your knives in optimal condition. Have them re-sharpened on a regular basis by the original manufacturer. Poor sharpening results in poor cuts, notches and miters, and can damage your knives. The experts at Helmold sharpen thousands of knives a year. We do it right and fast! We can have your re-sharpened knives back in your shop in 72 hours or less.

Fast, expert sharpening ensures quality and productivity:

Cutter Knives

- Upper
- Lower
